# Glastonin polku kohti kestäväää lasintuotantoa

Marko Mökkönen, Glaston Oyj

**glaston**  
seeing it through

glaston

Our vision is to lead the global glass processing industry forward with innovative technologies and lifecycle solutions

**MEGATRENDS  
ACCELERATING  
OUR BUSINESS**

- Climate change & resource scarcity
- Urbanization
- Economical & political reality
- Embedded technology
- Social sustainability

**GLASTON'S PURPOSE**  
Building a better tomorrow  
through safer, smarter, and  
more energy-efficient  
glass solutions

**CORE TECHNOLOGIES AND  
SERVICES FOR**

Tempering | Laminating | Insulating Glass  
Mobility | Solar

**CORNERSTONES**

- Innovate with customers
- Sustainability
- Empower Glastonians
- Industry-leading customer service
- Global sourcing & manufacturing

We are committed to our customers

We learn from each other

**VALUES**

We share the passion for glass

Together we build the future

---

As a listed company, Glaston seeks compliance across all areas of ESG, with sustainability as a strategic cornerstone driving our impact.

glaston

---

The DMA process integrates sustainability into core strategies and operations by identifying and prioritizing material topics most significant to the business and its stakeholders.

Efforts and resources are directed toward areas with the greatest impact, enhancing resilience and addressing growing regulatory and stakeholder demands.

---

80% of Glaston's GHG emissions are generated during  
the use phase of our Heat Treatment machines,  
which are developed in Tampere

---

Glaston is committed to reduce scope 3 GHG emissions 58.1% per square meter of sold machine processing capacity by FY2032 from a FY2022 base year.

---

Glaston's climate agenda emphasizes energy efficiency and enabling our customers to decarbonize their processes.

For Glaston, this means offering high automation, enhanced energy-efficient solutions, product upgradability, and lifecycle services.

We see sustainability as a business opportunity.

**glaston**

—

Data plays a crucial role in advancing sustainability within company processes and products, enabling informed decision-making, improving efficiency, and enhancing accountability.

---

In the short term, we focus on building data capabilities to create a connected value chain in sustainability data and reporting.

In the medium term, we expect our suppliers to actively contribute by providing transparent and reliable data on their own sustainability practices.

AI will play a role in advancing corporate sustainability.
